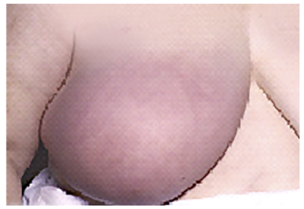
# Signs & Symptoms



Inverted Nipple
Lumps
Dimpling

Rashes
Discharge
Swelling

If these symptoms present themselves check with your doctor. These symptoms don't necessarily mean you have cancer however it is alwaysbetter to verify.

A step by step

# Breast Cancer

## Prevention Guide

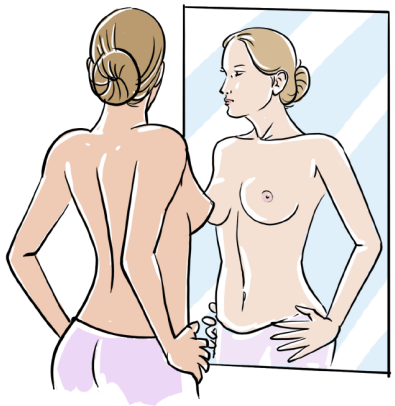
# A Special Thanks To:

PCSN

For helping make this possible!

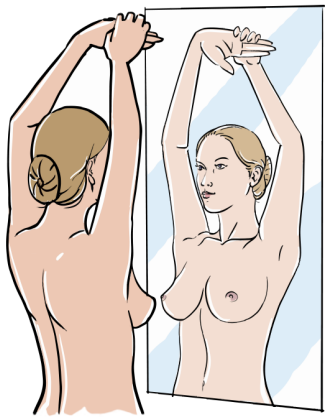
# Examining Yourself In three steps

1.



In front of a mirror place your arms on your hips with your shoulders straight. Look for unusual : size, shape, color, swelling, and distortion.

2.



Raise your arms and do the same. Also look for nipple discharge and lumps under the arms.

3.

Lay down and using the opposite hand (as shown) firmly press 3-4 fingers on your breast and make cicular motions the size of a quarter. Cover the entire breast area top to bottom & side to side. This from your collarbone to upper abdomen & armpit to breasts.
